

Midterm 2 Kahoot Review Questions

To double check your answers: Watch the kahoot review posted on canvas.

To do so navigated to the Zoom tab → More Pages → Published Recordings → MIDTERM 2 REVIEW Session - Friday, July 18 4pm EST)

1. In _____ reinforcement something is added while in _____ reinforcement something is taken away.
2. The _____ theory of emotion suggests that we feel emotions and experience physiological reactions simultaneously.
3. The _____ theory of emotion suggests that an external stimulus leads to a physiological reaction which leads to emotion.
4. Which is NOT considered a major theory of emotion?
5. Below is the Circumplex Map of Emotion. In this model, emotions are plotted along two continuums: _____ and _____.
6. The _____ theory of emotion suggests stimuli elicit a physiological response which we cognitively appraise and label as emotion.
7. When the perception of a stimulus gets transformed into a memory this is called:
8. Which of the following explains why a 3-year-old thinks all her friends like goldfish because she likes goldfish?
9. Which of the following explains why a child might want a tall 8oz glass of juice instead of a short 8oz glass?
10. In the strange situation test, a _____ child is distressed when the attachment figure leaves.
11. In the strange situation test, a _____ child doesn't pay attention to the parent when they return.
12. In the strange situation test, a child who is not distressed when the parent leaves has what attachment style?
13. Which of the following is NOT a need?
14. _____ decreases a behavioral response while _____ increases it.
15. A student talks out of turn in class and is given extra homework by the teacher.
16. A teacher has a no weekend homework policy if the class average is a B+ or above.
17. Receiving a free coffee after buying 10 coffees is an example of which reinforcement schedule?

18. Fishermen cast their lines repeatedly because they don't know how long it will take to catch a fish.
19. A weekly allowance is an example of which type of reinforcement schedule?
20. _____ is a type of associative learning when we learn that a stimulus predicts another stimulus.
21. Which option best describes a primary and secondary reinforcer?
22. _____ learning takes place in the absence of reinforcement.
23. Teaching a dog to hoop jump: 1 rewarding it for approaching the hoop, 2 touching it with its nose, 3 jumping through.
24. X describes how the strength of an association between two stimuli depends on how surprising the UC stimulus is.
25. _____ is a type of associative learning when we learn that a behavior leads to a certain outcome.
26. _____ refers to a decrease in response to a stimulus after repeated exposure.
27. The neural process involved when memories are recalled and then stored again.
28. Which of the following is NOT one of the three steps in memory information processing?
29. _____ amnesia affects your memory for events before a brain injury, while _____ affects your memory after an injury.
30. A time during which certain experiences must occur for development to proceed normally is described as _____.
31. The _____ effect is the idea that the ability to recall items from a list depends on the order of presentation.
32. Better recall for early items is due to the _____ effect. But better recall for late items is due to the _____ effect.
33. The _____ memory system underlies the primacy effect, and the _____ memory system underlies the recency effect.
34. The cognitive decline seen in Alzheimer's Disease may result from impaired _____ from degeneration of the hippocampus.
35. _____ is the infant reflex that causes babies to turn their head towards the side of the stimulus.
36. When someone feels like it is better to not lose \$5 than to find \$5, they are experiencing _____.
37. Availability, representativeness, anchoring, and framing are examples of _____.

38. People are bad at predicting how they will feel about things in the future. This is a result of _____.
39. A(n) _____ model is the best example of a category, while a(n) _____ model represents the average example of a category.
40. _____ Intelligence refers to the ability to think logically about abstract concepts without any previous knowledge.
41. If you recall exactly what you did on Monday night but can't remember the brain lobes - you have excellent ___ and poor ___.
42. I'm trying to learn Spanish right now but my primary school French classes keep confusing me - this is an example of:
43. Crystallized intelligence is best described as the ability to use _____ to solve problems and make decisions.
44. A process in classical conditioning whereby a previously extinguished CR reemerges after the presentation of the CS.
45. Two types of explicit memory: _ involves the recall of personally experienced events, and _ involves the recall of facts.
46. Two commonly used intelligence tests are the _____ test for children and the _____ test for adults.
47. This child is engaged in _____ type of processing.
48. Theory that views development as arising from an interaction between biological changes and environmental/cultural contexts.
49. The concept that describes the tendency for bodily functions to maintain equilibrium is known as _____.
50. _ motivation is studying because you find the subject fascinating; _ is because you want to receive a good grade.
51. Which of the following best represents an example of dual encoding?
52. What area of H.M.'s brain was damaged to cause profound anterograde amnesia?
53. After watching a superhero movie, you become more likely to notice superhero merchandise in stores. This is an example of:
54. Which of the following best exemplifies the concept of Encoding Specificity in memory?
55. Someone who holds their phone up with an egg carton does not have issues with _____.
56. Previous visits to the library establish the idea that you must be quiet for fellow students. This is an example of a:

57. You're more likely to buy beef that is labeled as 80% lean as opposed to 20% fat. This is an example of:
58. On TV, you see numerous ads with rugged men driving pickup trucks. You conclude: pickup trucks are only for rugged men.
59. Short-term memory has a limited storage capacity, typically estimated to be around:
60. ___ refers to a basic unit of meaning, while ___ refers to a basic unit of sound.
61. A sketch of a violin vs the word violin is an example of a ___ vs ___ representation.
62. When a child learns the word for milk, they start to call all food and drink milk. This is an example of ___.

Here are a few more explanations to questions that students struggled with.

Question 61 – Analogical Representation vs. Symbolic Representations. Analogical representations are mental images or sensory representations that resemble the objects they represent. They preserve physical attributes of the object – and often involve mental imagery. In contrast, Symbolic Representation are abstract symbols or signs that stand for objects or ideas without resembling them. Symbolic Reps rely on learned associations and cultural conventions.

Question 56 - Schema vs Script – A schema is a mental framework that organizes & interprets information. They help you quickly process and categorize new information by fitting it into existing knowledge structures. In contrast, a script is a specific type of schema that outlines the typical sequence of events in a particular context. Scripts provide a structured framework for understanding and predicting the flow of activities. Question 56 involves the events that take place at a library so that's why this is script instead of schema.

Question 46 - The Stanford-Binet Intelligence Scale assesses cognitive abilities, motor skills, language abilities, social-emotional functioning, and adaptive behavior. It is suitable for a wide age range (from toddlers to adults), WAIS is specifically designed for adults and is commonly used in clinical settings/neuropsychological assessment.

Question 42 - Proactive interference == Old information disrupts new learning. Retroactive interference == New information disrupts recall of old information. In the example, your old learning of French disrupts your ability to learn new information about Spanish.

Question 18 - Variable Ratio == reinforcement is provided after an unpredictable number of responses. Fishermen cast their lines repeatedly because they don't know how long it will take to catch a fish.
